

Alfamec

Injectable

Composition:

Each ml solution contains: 10mg Ivermectine (=10g/L)

Action:

Ivermectin acts by binding selectively and with high affinity to glutamate-gated chloride channels which occur in invertebrate nerve and muscle cells. This leads to hyperpolarisation of these cells, resulting in paralysis and death of the parasite. Compounds of this class may also interact with other ligand-gated chloride channels, such as those gated by the neurotransmitter γ -aminobutyric acid (GABA)

Indication:

Treatment of internal and external parasites in cattle, sheep, goats, pigs and camels.

Dosage and administration

By s.c. injection only: 1ml/50kg b.w.

Withdrawal times:

Meat: 28 days

Milk: 28 days

Storage:

Store Cool (8-15°C) and protected from light

Presentation:

Per 12 vials of 50 ml.

For Veterinary Use Only

Manufacturer:

Alfasan International B.V.
